

PocketLedger Application Development Prompts

This document outlines detailed development prompts for the PocketLedger personal finance and ledger platform, covering both web and mobile application aspects. The prompts are derived from the provided Product Requirements Document (PRD) and aim to guide the implementation of each core feature.

1. Registration and Login Page

Prompt: Develop the user registration and login functionalities for the PocketLedger application. This includes:

- **User Registration:** Implement a registration form requiring full name, email, and password. Include live password-strength evaluation (weak/medium/strong) as the user types. Ensure email verification is tracked per account.
- **User Login:** Create a login interface for email and password. Include a "Remember me" option to save the email for subsequent visits.
- **Forgot Password Flow:** Implement a secure password reset mechanism. When a user submits their email, the backend should send a real password-reset email with a secure, time-limited token.
- **Biometric-Equivalent Unlock:** For supporting devices, integrate WebAuthn/platform passkey support. Additionally, provide an optional 4-digit PIN/lock code re-entry for quick re-authentication within a session.
- **Session Management:** Implement JWT-based session management with silent refresh. Ensure automatic logout occurs upon refresh-token expiry.
- **Account Deletion:** Provide a clear account deletion flow with a confirmation dialog and permanent data purge.

2. Dashboard

Prompt: Design and develop the main dashboard view for the PocketLedger application, providing users with an at-a-glance overview of their financial status. The dashboard should include:

- **Period Selector:** A clear selector allowing users to view data for "Today," "This Week," "This Month," or a "Custom date range."
- **Current Balance Summary:** A prominent card displaying the user's current total balance.

- **Income vs. Expense Summary:** Cards summarizing total income and total expenses for the selected period, including directional icons (inflow/outflow).
- **Savings Rate Indicator:** Display the percentage of income retained for the selected period.
- **Category Breakdown Chart:** An interactive donut/pie chart visualizing the category breakdown of expenses, with per-category percentage labels.
- **Top Spending Categories:** A ranked list of the top spending categories, showing the icon, name, and amount for each.
- **Recent Transactions:** A list of the most recent transactions with a "See All" link leading to the History section.
- **Empty State:** An illustration and an "Add Transaction" call-to-action when no transactions have been recorded yet.

3. Income and Expense Add (Transaction Management)

Prompt: Implement the functionality for adding and managing income and expense transactions. This feature should be accessible via a prominent "plus icon" and include:

- **Add Transaction Modal/Sheet:** A modal or sheet interface for adding new transactions with the following fields:
 - **Type Toggle:** A toggle to switch between "Income" and "Expense."
 - **Amount Input:** Field for entering the transaction amount.
 - **Category Picker:** A selector for assigning a category to the transaction.
 - **Payment Method Selector:** Options for payment methods (e.g., Cash, Card, UPI, Bank Transfer).
 - **Wallet Selector:** Options to select a wallet (e.g., Personal, Savings, Business, or user-defined wallets).
 - **Note:** A free-text field for adding transaction notes.
 - **Transaction Date:** A date picker for specifying the transaction date.
- **Receipt Capture:** Functionality to attach a photo of a receipt via camera capture or file upload. Allow users to preview and remove the receipt before saving the transaction.
- **Edit Transaction:** Provide a full detail screen to edit existing transactions, offering the same fields as the add transaction modal.
- **Delete Transaction:** Implement a mechanism to delete transactions, including a confirmation step.

4. Categorized Option (Category Management)

Prompt: Develop a comprehensive category management system that allows users to organize their income and expenses effectively. This includes:

- **Create Category:** Allow users to create new custom categories, specifying a name, icon, and color.
- **Edit Category:** Enable users to modify existing categories, including their name, icon, and color.
- **Archive Category:** Implement functionality to archive categories that are no longer in use, without deleting historical transaction data associated with them.
- **Pre-defined Categories:** Provide a set of default categories for common income and expense types.

5. History (Transaction History)

Prompt: Create a searchable and filterable transaction history view that allows users to review all their past income and expense entries. The history section should feature:

- **Search Functionality:** A search bar to find transactions by note, category, or amount.
- **Filtering Options:** Filters for:
 - **Date Range:** Custom date range selection.
 - **Transaction Type:** Filter by Income, Expense, or All.
 - **Category:** Filter by specific categories.
 - **Wallet:** Filter by specific wallets.
 - **Payment Method:** Filter by payment method.
- **Sort Options:** Ability to sort transactions by date (newest/oldest), amount (highest/lowest).
- **Transaction List:** Display transactions in a clear, chronological list, showing key details like date, type, category, amount, and note.
- **Infinite Scrolling/Pagination:** Implement efficient loading of historical data.

6. Reports

Prompt: Develop a robust reporting section that provides users with visual insights and export capabilities for their financial data. The reports should include:

- **Report Types:** Generate weekly, monthly, and yearly summary reports.

- **Visualizations:** Include charts and graphs (e.g., bar charts for monthly spending trends, pie charts for category distribution) to represent financial data visually.
- **Export Functionality:** Allow users to export reports in both CSV and PDF formats.
- **Custom Report Generation:** Potentially allow users to define custom report parameters (e.g., specific categories, date ranges).

7. Settings

Prompt: Implement a comprehensive settings section where users can customize their PocketLedger experience and manage their account. The settings should include:

- **Currency Selection:** Allow users to select their preferred currency (supporting INR, USD, EUR, GBP).
- **Theme Selection:** Options to switch between different application themes (e.g., light/dark mode).
- **Security Settings:**
 - **Password Management:** Option to change password.
 - **Two-Factor Authentication (2FA):** Enable/disable and manage TOTP-based 2FA.
 - **Passkey Management:** Manage WebAuthn/passkey registrations.
- **Notification Preferences:** Configure daily reminders, weekly/monthly summaries, and budget-overrun alerts.
- **Data Management:**
 - **Data Backup & Restore:** Functionality to back up and restore user data.
 - **Account Deletion:** Access to the account deletion flow.
- **Wallet Management:** Create, edit, and manage multiple wallets.
- **Budget Management:** Set and manage category-level budgets with overrun alerts.
